THE LIVING PROTOTYPE

Green Grocer — Interactive Grocery Delivery Experience

A high-fidelity interaction concept focused on speed, clarity, one-handed usability and immediate system feedback.

Prepared as a GitHub-ready prototype package

01 — Project Direction

Scenario: Green Grocer is a fresh grocery delivery experience built around a fast, low-friction shopping journey. The interface emphasizes the promise of 15-minute delivery while keeping product discovery, cart review and checkout simple.

UX objectives

Objective	Design response
Speed	Short product cards, prominent delivery promise and a direct add-to-cart action.
Clarity	Strong hierarchy, concise copy, visible totals and a focused primary CTA.
Feedback	Toast confirmation, live cart count, quantity updates and an explicit order-success state.
Trust	Visible ETA, delivery fee and checkout details before the final action.
Ease	Large touch targets and minimal steps for a time-pressured user.

02 — Screen & Flow Architecture

The prototype is organized as a simple conversion funnel:

01	HOME	Discover + add
02	CART	Review + edit
03	CHECKOUT	Confirm + place
04	SUCCESS	Reassure + return

Screen 01 — Home

Delivery promise → search → promotional message → popular products → Add to cart. The home screen is designed to communicate freshness and speed within seconds.

Screen 02 — Cart

Products can be incremented, decremented or removed. Subtotal, delivery fee and total update immediately. The checkout CTA remains visually dominant.

Screen 03 — Checkout

Address, payment, delivery note, ETA and final amount are presented in a compact confirmation step. Place order completes the flow.

03 — Micro-interactions

Interaction	Feedback	UX value
Add to cart	Toast + cart count increments	Confirms the action immediately
Product hover	Card lifts subtly + shadow	Makes controls feel responsive
Quantity + / –	Line item and total recalculate	Keeps system state transparent
Checkout CTA	Elevated orange action + hover motion	Creates a clear next step
Place order	Success screen + ETA	Reduces uncertainty after conversion
Bottom navigation	Active state changes	Maintains orientation

Visual direction

Fresh green is used for brand and positive system states; warm orange is reserved for the main conversion action. Warm neutrals keep the grocery imagery and content feeling approachable rather than clinical.

04 — Deliverable & GitHub Setup

The accompanying ZIP contains a self-contained interactive prototype plus documentation. No external libraries or image assets are required, so it is easy to host on GitHub Pages.

Included:

- index.html — responsive clickable prototype
- README.md — project overview and GitHub Pages instructions
- UX-Interaction-Spec.md — screen-by-screen interaction specification

Recommended repository structure

```

■■■■ index.html  
■■■■ README.md  
■■■■ UX-Interaction-Spec.md
```

Design quality checklist

- ✓ Clear primary user flow
- ✓ Connected interactive states
- ✓ Immediate feedback
- ✓ Responsive layout
- ✓ Consistent visual hierarchy
- ✓ Conversion-focused checkout
- ✓ GitHub-ready files

Note: the uploaded DecodeLabs brief is image-based and its text layer could not be extracted automatically; the prototype was built from the visible Project 4 brief pages.
